VOICES OF PUBLIC HEALTH

A message from our community

2024 brings exciting developments in UC Merced's Public Health Department!

We are thrilled to share exciting developments from across the UC Merced Public Health community. Read about our cutting-edge research in environmental health, take a peek at the plans for our new building, and hear from our student leaders and alumni.

"It has been such a privilege to witness our Valley's community members and organizations, health agencies, elementary and high schools and UC Merced students and faculty working toward a common goal to improve public health in our region." — Asa Bradman, Department Chair

Research and action

Improving environmental health through community-engaged research

UC Merced faculty are at the forefront of understanding and addressing the adverse health effects of environmental hazards and climate-change related health threats. We highlight their efforts to work with communities to monitor and mitigate environmental challenges such as air and water pollution and extreme heat.

Student leaders

Doctoral student tackles food insecurity on both sides of the US-Mexico border

Many Latino populations have lower diet qualities and are at risk of developing malnutrition, diabetes, hypertension, and obesity. 5th year doctoral student Kimberly Sánchez is tackling nutrition-related health disparities in Latino communities through research on food programs and binational health promotion interventions.

Featured alumni

Doctoral alum advances health equity through grant-making and community-engaged research

Since graduating with her PhD in Public Health, alum Dr. Tashelle Wright has continued to advance health equity as a program officer at the Tobacco-Related Disease Research Program where she supports initiatives on social and behavioral health, community partnered participatory research, and health equity in research and science.

Faculty on the forefront

Reaching Native American communities through tele-nutrition classes

Rural Native American communities face disproportionate rates of food insecurity and malnutrition. Karina Diaz-Rios and her team are undertaking a study to adapt and deliver culturally acceptable tele-nutrition classes to caregivers of young children in Native American communities in rural California.

Housing instability in childhood has life-long health consequences

Irene Yen's recent study shows that adults who moved homes frequently in childhood may be at risk for worse health. This research highlights that policies that support housing stability for families, such as eviction protections, can contribute to better health later in adulthood.
